Education

University of California, Berkeley

B.S. in Electrical Engineering and Computer Science (EECS)

May 2023

- **GPA: 3.73**
- Courses: Structure & Interpretation of Computer Programs (Python, SQL), Data Structures (Java), Great Ideas of Computer Architecture (C), Discrete Mathematics and Probability Theory, Linear Algebra and Differential Equations, Foundations of Data Science (NumPy)
- Upcoming Courses: Efficient Algorithms and Intractable Programs, Introduction to Database Systems

Skills

Languages Python, Java, C, Javascript/TypeScript, HTML, CSS, C#

Development Tools Git, Jira, Node.js, Angular, React, Nativescript, Firebase, Jenkins

Experience

DIEMlife

New York, NY

Software Engineer Intern

May 2021 - July 2021

- Full stack development for web/mobile app built in Angular frontend, Java backend, MySQL database, Nativescript
- Collaborated with dev and business teams using Jira ticketing, Agile Scrum workflow, Git version control, and Jenkins deployment to fix bugs and implement new features
- Improved donor/registration reports using the Stripe API to include dispute and refund statuses, added coupon redemption limit support, revamped notifications to direct users to proper activity, developed the first version of an activity page allowing users to create and cheer posts
- Launched Apple Health/Google Fit proof of concept for automation of user activity logging

METEOR Studio

Chandler, AZ

Research Assistant

June 2020 - December 2020

- Developed features for educational VR chemistry labs to enable students to remotely perform experiments with a headset and 3D printed lab materials
- Implemented Unity UI elements to display tutorial, lab procedures, and data table for measurement collection
- Built web portal interface to allow teachers to upload pre-lab and post-lab questions, enabling experience to be modular
- Incorporated user feedback to improve learning experience by driving clarity and creating intuitive UI/UX

UC Berkeley College of Engineering

Berkeley, CA

CS61B Academic Intern

August 2020 - December 2020

- Hosted office hours and labs for 50+ students as a member of CS61B Data Structures course staff
- Taught concepts such as runtime analysis, linked lists, trees, hashing, searching/sorting algorithms

Projects

PillarU Project manager for PillarU, an incubator team of four UC Berkeley students. Developed as an MVP aimed at connecting high school students with university students to grant applicants valuable insights to campus culture. Employed feedback after pitching to various VC's from the Bay Area.

bQuarky (HackMIT) Designed and developed a web app that given user input interests, returns URL's to recommend online activities and communities during quarantine. Built front-end UI and JavaScript-Firebase interfaces to process requests and manage database entries.

Gitlet (CS61B) Engineered a lightweight version of Git with support for status, add, commit, merge, checkout, etc. Implemented merge conflict detection and file modification to display content differences. Wrote design document and utilized OOP principles/test-driven development methods to maintain code.

Extracurriculars

WDB Learning web development skills and interacting with industry professionals at Berkeley.

Convergent at Berkeley Build team lead assisting incubator teams building MVPs from May 2020- May 2021.

Cal Wushu Wushu athlete performing at cultural events and competing in collegiate competitions.

Mechanical Keyboards Built, modified, and soldered my own custom mechanical keyboard.
